

Frontend Development Tasks & Instructions

- **TASK 1: Professional LinkedIn Announcement**
 - **Objective:** Share your official internship acceptance on your professional network.
 - **Requirements:** Post a high-resolution copy of your official **Internship Offer Letter** on LinkedIn. Craft a compelling caption detailing your learning goals, tag **Progree**, and use hashtags: `#frontend` `#html` `#css` `#progree`
- **TASK 2: Semantic Mobile-Responsive Marketing Landing Page**
 - **Objective:** Code a single-page product marketing interface with fully responsive layouts.
 - **Requirements:** Write clean semantic HTML5 structures styled with custom CSS layout modules (Flexbox or Grid). Enforce responsive viewport grid changes across multiple mobile and tablet device boundaries using explicit CSS media queries, completely eliminating horizontal scrolling layout bugs.
- **TASK 3: Asynchronous REST API Weather Portal Application**
 - **Objective:** Build a data-driven application interface fetching and rendering remote data dynamically.
 - **Requirements:** Write a single-page JavaScript application interface (React or Vanilla JS). Use the Fetch API or Axios with async/await handlers to retrieve real-time weather information from a public endpoint (OpenWeatherMap API), handling loading indicators and error states gracefully while injecting the results into the UI.
- **TASK 4: Mini Project - Enterprise Analytical Administration Portal with Reactive Chart Objects**
 - **Objective:** Architect an interactive business analytics data portal managing rich visual metric components.
 - **Requirements:** Develop a multi-view client-side application using frontend routing frameworks. Integrate data visualization libraries (Chart.js or Recharts) to parse mock JSON profiles into responsive graphs. Build complete client-side searching filters, multi-column sorting matrices, a dark-mode theme toggle state engine, and ensure full cross-browser compatibility.
